Story of the Lake in S39

For Mixed Chamber Ensemble and Electronics

by Jinghong Zhang

2015

Program Notes

Story of the Lake in S39 depicts a lake in S39, a place that exists solely in the composer's imagination. The composer portrays the lake in a musical language, using texture and harmony to capture the environment, the details, and the events that take place around the lake.

Story of the Lake in S39 is a piece for interactive live electronics and mixed chamber ensemble. The electronic component uses the visual programming language, Max, in order to manipulate the sound of the acoustic instruments. By using various delay techniques, the composer makes each instrument sound like several, thus creating the effect of a large orchestral force. The result is a dense soundscape that captures the experience of the lake in S39 and its colorful scenery.

Performance Information

Stage Setup:

Electronics Requirements:

5 microphones
Position one mic close to each instrument, locating the piano mic close to its strings.

An audio interface with stereo output and at least 5 mic inputs

A laptop
(to run the Max patch that controls the electronics)

The Max patch is available from the composer upon request at jz36@JinghongZhang.com

Max Patch Operation for Electronics:

The patch operator should follow the instructions in the electronics part of the score to trigger each individual "Cue" button (Cues 1-11) in the patch.

The graphics in the Electronics part of the score represent the electronic sound, while the text inside parentheses describes what effects are applied to the electronics.

Instrumentation

Flute

Clinet in B♭

Piano

Violin

Cello

Conductor

Electronics

The Story of the Lake in S39
Module 1 opened (multiplying channels to many times larger than original sound by multiple delay lines and reverbs and pitch shifting effects)
1: Record Flute and Cello
2: Record Clarinet and Piano
2: Record Violin
put your bow down and pizz.
